Introduction to the RCP post-CCT Obstetric Medicine Credential

Welcome to the Royal College of Physicians (RCP) Credential in Obstetric Medicine. It has been designed for post-CCT (or equivalent) physicians with an interest in Obstetric Medicine, who wish to gain a credential in this specialist area.

The following pages include information regarding approved training centres (Appendix I), as well as eligibility criteria and time commitment for undertaking the credential. There are details of the Capabilities in Practice (CiPs) which must be achieved (Table 1), descriptions of the areas of expertise that need to be demonstrated to achieve competence, and recommendations as to how these should be evidenced (Table 2) as well as the outcome decision aid (Table 3).

Also included are descriptions of the role of the Educational Advisor (Appendix II) and External Reviewers (Appendix III), and outlines of the certification and appeals processes. In addition, each training centre will provide participants with an induction pack which will contain an introduction to the Obstetric Medicine team, an overview of the unit, key contacts, and an outline job plan.

This is a learner-led credential. You will need to plan your own learning and identify opportunities to gain the knowledge and expertise required to complete the credential. You will be supported by an Educational Advisor in your obstetric medicine training centre who will provide guidance during your training period there, and advice on how the knowledge and skills developed during the credential might be used when you return to your usual clinical environments.

We would like to wish you every success with this credential.

---

1 Post-CCT or equivalent physicians to include: those already in substantive consultant posts, specialty registrars who have a CCT or CESR or equivalent, and SAS doctors as appropriate
Obstetric Medicine post-CCT Credential Training Requirements

Eligibility

Physicians undertaking this Obstetric Medicine credential (hereafter ‘participants’) must have a CCT (or equivalent) in a medical specialty. Applications to undertake the credential are accepted from physicians in any medical specialty provided they are actively involved in delivering joint obstetric and specialist care, whether in joint clinics or the acute setting.

Participants must be fully registered with the GMC, and must not have any restrictions on their practice which could prevent them from completing the credential training or practising as a physician upon completion of the credential.

Once a participant is accepted on to the credential, their Educational Advisor must ensure that a completed copy of ‘Form A’ (Appendix IV) is sent to the Assessment Unit of the RCP London (obstetricmedicine@rcplondon.ac.uk).

Time Commitment

When completed full-time, the RCP Obstetric Medicine credential runs over a six-month period. During that period, participants are required to spend a minimum of 50% of their clinical practice time at one of the Obstetric Medicine training centres approved to host the RCP credential. Less than full time participants may need longer, pro rata, to complete the credential. The appropriate credential training period will be agreed with the Educational Advisor at the start of the credential. (See also ‘Reasonable adjustments and mitigating circumstances’ in the Exceptional Circumstances section.)

Details of the approved training centres can be found in Appendix I.

The Credential Process

Participants must identify learning needs and learning opportunities which enable them to develop the knowledge, skills and behaviours necessary to achieve all five ‘Capabilities in Practice’ (CiPs) at level 4 (see Table 1)

In order to achieve the ‘Capabilities in Practice’ (CiPs) required for the Obstetric Medicine credential, participants must address the 22 areas of expertise contained in Table 2. The types of evidence which could be provided to demonstrate development in these areas are summarised in column C of the table. A list of relevant abbreviations is provided in Appendix V. The evidence required to complete the credential (including minimum numbers of assessments) can be found in the Outcome Decision Aid (Table 3).

As well as an Educational Advisor who will be allocated for the duration of the Obstetric Medicine credential, day-to-day supervision will be provided by Clinical Supervisors, who should be identified by, and work within, the approved training centres.

Clinical supervisors will have expertise within the field of Obstetric Medicine and may include physicians, maternal medicine obstetricians, midwives and anaesthetists. Clinical supervisors may

---

2 Post-CCT or equivalent physicians to include: those already in substantive consultant posts, specialty registrars who have a CCT or CESR or equivalent, and SAS doctors as appropriate
change during the course of the credential, depending on individuals’ availability and other clinical commitments. Similarly, if a participant is spending time in a different department, their Clinical Supervisor for that period may need to change accordingly.

The Clinical Supervisor will be able to assess performance, provide an appropriate level of supervision for clinical activities based on the competence of the individual participant, and offer feedback either informally, or formally through the completion of WPBAs or MCRs as appropriate.

Table 4 illustrates the recommended milestones for completion of the credential training requirements over the six month period for a full-time participant. Less than full-time participants will need to agree with their Educational Advisor how they will fulfil the credential requirements and whether a pro rata extension to the credential training period is needed.

It is anticipated that participants who are on track to complete the credential successfully will achieve a minimum of level 2 on each CiP (see Table 1) by the time of their first interim review meeting with the Educational Advisor, and at least level 3 by the second interim meeting. If these targets are not achieved, the participant and Educational Advisor should discuss an action plan. In rare cases this may result in withdrawal from the credential. In most cases it will be possible to develop a viable solution to remedy gaps and weaknesses in performance. In some cases it may be necessary to apply for an extension to the normal duration of the credential training (see Extension to remedy gaps or weaknesses in performance).

**Portfolio of Evidence**

It is the responsibility of the participant to maintain a portfolio of evidence which shows their progress and demonstrates achievement of the credential requirements. Patient confidentiality must be safeguarded throughout the portfolio. The growing portfolio of evidence, and any gaps or weaknesses in experience or performance, should be discussed with the Educational Advisor at each interim review meeting.

At the end of the credential, the participant must submit their portfolio to their Educational Advisor. All relevant evidence (such as WPBAs, log of cases, reflections) in line with the decision aid, should be emailed to the Educational Advisor no later than the end of week 26 (or adjusted duration of training placement for those working less than full time or those to whom an extension has been granted in line with procedure). This portfolio of evidence will be reviewed by the Educational Advisor at the final review meeting. Their recommendation will be communicated to the External Reviewer, who will also assess the portfolio to inform the decision of whether or not to award the credential.

External Reviewers are appointed at the start of the credential and allocated by the approved training centre. For more information about their role and responsibilities, please see Appendix III.

</table>
| **Liver Disease in pregnancy** | Explains the effects of pregnancy on physiology in normal individuals and those with pre-existing hepatobiliary disease. Appropriately manages the risks of pregnancy for the mother and fetus for chronic and pregnancy induced hepatobiliary diseases:  
  - Chronic active hepatitis  
  - Primary biliary cirrhosis  
  - Viral hepatitis  
  - Alcoholic liver disease  
  - Jaundice  
  - Gallstones  
  - Intrahepatic cholestasis of pregnancy  
  - Acute fatty liver of pregnancy  
Demonstrates how to manage co-morbid medical conditions in patients with liver transplant during a pregnancy with specialist input. Appropriately manages acute cholecystitis in pregnancy and in the puerperium. Demonstrates when women with hepatobiliary disease require specialist multidisciplinary care for preconception counselling, antenatal and puerperal period. Appropriately manages de-novo hepatobiliary disease in pregnancy and is aware when specialist input is required. Appropriately manages the causes of pregnancy induced liver abnormalities. Explains the need for referral to and the role of specialists in the management of women preconception, antenatally and in the postpartum period. | MCR CbD Logbook of cases Simulation training with assessment Reflection |
<p>| <strong>Respiratory Disease in pregnancy</strong> | Explains the effects of pregnancy on pulmonary physiology in normal individuals and those with pre-existing respiratory disease. Explains the potential risks of pregnancy to the mother and fetus in patients with chronic respiratory disease. Appropriately manages co-morbid medical conditions in patients with pre-existing respiratory disease or lung transplant during a pregnancy with particular emphasis on | CbD Mini-CEX Logbook of cases Simulation training with assessment Reflection DOPS |</p>

<thead>
<tr>
<th>Diabetes in pregnancy</th>
<th>Explains the metabolic effects of pregnancy.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Explains the importance of glucose control prior to conception and during pregnancy and providing preconception counselling in all child bearing women with pre-existing diabetes.</td>
</tr>
<tr>
<td></td>
<td>Demonstrates how to manage the microvascular and macrovascular complications in patients with pre-existing diabetes mellitus during pregnancy with particular emphasis on minimisation of the risk to the mother and fetus and when to refer for specialist input.</td>
</tr>
<tr>
<td></td>
<td>Recognises the complications and outcomes of infants of women with diabetes mellitus.</td>
</tr>
<tr>
<td></td>
<td>Demonstrates how to manage acute diabetic emergencies in pregnancy and in the puerperium:</td>
</tr>
<tr>
<td></td>
<td>• Diabetic ketoacidosis</td>
</tr>
<tr>
<td></td>
<td>• Hypoglycaemia</td>
</tr>
<tr>
<td></td>
<td>Recalls the risk factors for gestational diabetes, current diagnostic criteria and appropriate screening strategies.</td>
</tr>
</tbody>
</table>
Counsels women with pre-existing diabetes mellitus about the risks and implications of pregnancy and acts to minimise risks to mother and fetus regarding:
- Pre-eclampsia
- Macrosomia
- Intrauterine Growth Restriction (IUGR)
- Preterm delivery

### Endocrinology in pregnancy

Explains the physiological changes in normal pregnancy and in those with pre-existing endocrine disorders.
Explains the potential risks of pregnancy to the mother and fetus in patients with pre-existing endocrine diseases.
 Appropriately manages endocrine disorders during pregnancy with particular emphasis on minimisation of the risk to the mother and fetus and when to refer for specialist input:
- Thyroid disease
- Parathyroid disease
- Adrenal disease
- Pituitary disease
- Addison’s disease
- Vitamin D deficiency

Recalls how to manage pregnancy-induced endocrine disorders:
- Postpartum thyroiditis
- Lymphocytic hypophysitis
- Pituitary apoplexy
- Diabetes insipidus

### Neurological diseases during pregnancy

Recalls the physiological changes in normal pregnancy and in those with pre-existing neurological disorders.
Outlines the potential risks of pregnancy to the mother, fetus and neonate of women with pre-existing neurological diseases.
Awareness of the importance of stabilisation of the disease prior to conception and during pregnancy and providing preconception counselling in all child bearing women with pre-existing neurological diseases.
Recalls how to manage neurological disorders during pregnancy with particular emphasis on minimisation of the risk to the mother and fetus and when to refer for specialist input:
- Epilepsy
- Migraine
- Multiple Sclerosis
- Myasthenia Gravis
- Idiopathic intracranial hypertension
- Stroke

Appropriately manages pregnancy induced neurological disorders:
- Bell’s palsy
- Carpal Tunnel Syndrome
- Cerebral Vein Thrombosis (CVT)
- Reversible cerebral vasoconstriction syndrome (RCVS)

Demonstrates how to manage a seizure occurring in pregnancy.
Demonstrates the difference between CVT and TTP.

| Rheumatological disease during pregnancy | Explains to women with rheumatological disease about the risks and implications of pregnancy and acts to minimise risks to mother and fetus. Appropriately manage disorders during pregnancy with particular emphasis on minimisation of the risk to the mother and fetus and when to refer for specialist input; Systemic Lupus Erythematosus, Antiphospholipid Syndrome (APS), Rheumatoid Arthritis, Mixed connective tissue disease, Spondyloarthritides, Scleroderma. Appropriately manages de-novo rheumatological diseases in pregnancy and is aware when specialist input is required. Explains the results of immunological assays relevant to connective tissue disease in pregnancy (anti-Ro). Appropriately manages APS in pregnancy. | CbD Mini-CEX Logbook of cases Simulation training with assessment Reflection |
| Haematological diseases during pregnancy | Explains the physiological changes in normal pregnancy and in those with pre-existing haematological disorders. Explains the potential risks of pregnancy to the mother, fetus and neonate of women with pre-existing haematological diseases. Explains the importance of stabilisation of the disease prior to conception and during pregnancy and providing preconception counselling in all women of child bearing age with pre-existing haematological diseases. Appropriately manages haematological disorders during pregnancy with particular emphasis on minimisation of the risk to the mother and fetus and when to refer for specialist input; | CbD Mini-CEX Logbook of cases Simulation training with assessment Reflection |
- Anaemia
- Haemoglobinopathies
- Haemophilia
- Immune thrombocytopenic purpura

Appropriately manages pregnancy induced haematological disorders:
- Gestational thrombocytopenia
- Disseminated Intravascular Coagulation (DIC)

Explains and manages the pregnancy complications of sickle cell disease.

Appropriately manages de-novo haematological disease in pregnancy and is aware when specialist input is required.

Appropriately manage sickle cell disease in pregnancy as part of multidisciplinary team.

Understands the management of a major obstetric haemorrhage

\(^4\) The total number of weeks and timing of interim reviews can be adjusted pro rata for participants working less than full time.
Exceptional Circumstances: Interruptions and Extensions

In the event that a participant in the Obstetric Medicine credential needs to interrupt training or requires an extension, they should let their Educational Advisor know immediately. The participant should also contact the Assessment Unit at the RCP with a comprehensive description of the circumstances, using the following email address: obstetricmedicine@rcplondon.ac.uk. The Assessment Unit will then give advice on how to proceed, and recommend adjustments (interruption or extension) as appropriate.

It is the participant’s responsibility to request an extension or interruption and provide sufficient documentary evidence to support their case. Requests for extension or interruption should be submitted as early as possible to allow time to review the evidence and confirm the decision. Interruptions and extensions cannot normally be considered later than four weeks before the credential training period is due to end.

Reasonable adjustments and mitigating circumstances

If an interruption or extension is granted as a reasonable adjustment under the terms of the Equality Act, or as mitigation for absence due to significant and certified illness or other serious circumstances, that interruption or extension should be as long as appropriate to adjust for the impact of the protected characteristic or serious circumstances. The interruption or extension should not be longer than necessary, since this would unfairly advantage the participant. Extensions of this type do not affect the participant’s access to a separate extension to remedy gaps or weaknesses in performance.

Extension to remedy gaps or weaknesses in performance

The Educational Advisor may advise that a participant who cannot achieve the credential criteria within the allocated time be granted one three-month extension\(^5\) to remedy gaps or weaknesses in performance. This recommendation should be passed on to, and agreed by, the External Reviewer, to ensure that they are aware such an extension has been granted.

An extension to remedy gaps or weaknesses may occur during the credential training period as part of an improvement action plan\(^6\) OR after the portfolio of evidence has been assessed. It is not permitted for participants to have more than one such extension.

Details of confirmed extensions to remedy gaps and weaknesses in performance should be communicated to the RCP (obstetricmedicine@rcplondon.ac.uk) by the Educational Advisor. The RCP will maintain a record to ensure that regulations are followed e.g. that an extension to remedy gaps and weaknesses is not inappropriately granted following portfolio submission, if this had already been used during the credential training period.

---

\(^5\) Or period adjusted pro-rata for those working less than full time.

\(^6\) See The Credential Process section above
Assessment of completion of the post-CCT Credential in Obstetric Medicine

The assessment process is summarised in Figure 1.

First, the participant’s portfolio of evidence is assessed by their Educational Advisor to discern whether the criteria of the Obstetric Medicine credential have been met. The Educational Advisor makes a recommendation (pass, 3-month extension to remedy gaps and weaknesses in performance\(^7\), or fail) and passes this recommendation, along with the portfolio of evidence, to the External Reviewer.

The External Reviewer will review the portfolio of evidence, and if there is concordance between the assessments of the Educational Advisor and the External Reviewer the RCP will issue an outcome letter in line with their recommendations. If the outcome is a pass, then the credential is awarded and the RCP will issue a Certificate of Completion for the Credential in Obstetric Medicine.

Should there be disagreement between the Educational Advisor and the External Reviewer, a second External Reviewer will be invited to review the portfolio of evidence and provide the assessment decision (pass, fail, or extension\(^8\)). The second External Reviewer will be appointed by the RCP, drawing upon advice from senior members of the Obstetric Medicine community in the UK. The second External Reviewer will be from a different training centre to both the candidate and the first External Reviewer. If there is no suitable second External Reviewer available within the UK Obstetric Medicine community, an international appointment may be made.

If an extension is awarded at any stage in the assessment process, following the extension the assessment process starts anew with the Educational Advisor’s assessment. This is followed by one or two External Reviewer assessments as described above and in Figure 1, except that within this second assessment cycle the possible outcomes at each stage are limited to pass or fail.

Under certain circumstances it may be possible for a participant to appeal (see next section).

---

\(^7\) Three-month extension to remedy gaps and weaknesses in performance is only available if not already awarded and used prior to final portfolio submission for assessment.

\(^8\) Second External Reviewer can only recommend three month extension to remedy gaps or weaknesses in performance if not previously awarded and used by the participant at another time during the credential.
Figure 1 Obstetric Medicine Credential Certification Process

Educational Advisor (Obstetric Physician [OP]) reviews portfolio evidence. Recommendation?

- **Pass**
  - External Reviewer Recommendation
    - **Pass**
      - RCP informed
      - Certificate of completion issued (Signed by RCP)
      - Extension recommended only if not previously awarded and used
    - **Fail/Extension**
      - Second External Reviewer (OP) Recommendation
      - Discordance between EA and ER recommendations

- **Fail**
  - Extension? ONE opportunity for an extension of 3 months and assessment process restarts with Educational Advisor
  - External Reviewer Recommendation
    - **Pass**
      - RCP informed
      - Certificate of completion issued (Signed by RCP)
      - Extension recommended only if not previously awarded and used
    - **Fail**
      - No Award

- **Extension?**
  - **Pass**
    - Certificate of completion issued (Signed by RCP)
  - **Fail**
    - No Award
Appeals Process

The appeals process is summarised in Figure 2.

The permitted grounds for appeal are:
- Assessment processes not followed correctly
- Mitigating circumstances warranting an extension which the participant was unable, through no fault of their own, to submit in time for the extension request to be reviewed and decided before the final portfolio submission date.

In the event that the trainee is dissatisfied with the decisions of the Educational Supervisor and External Reviewer(s) an appeal may be lodged by emailing both the Educational Supervisor and the Assessment Unit of the RCP London (obstetricmedicine@rcplondon.ac.uk). This should be done within 10 working days of the outcome being communicated to the trainee. The trainee should outline in their email the reasons for their appeal, including documentary evidence to support their appeal where appropriate (for example a medical note or death certificate). An additional External Reviewer will then be appointed by the RCP to examine the grounds for appeal and review the trainee’s portfolio of evidence, and decide whether the appealed outcome should be upheld.

If the appeal is successful due to mitigating circumstances (2nd bullet point above), the trainee may be granted an opportunity for extension of the credential training period, as described in the ‘reasonable adjustments and mitigating circumstances’ section above. The portfolio would then be reassessed by the Educational Supervisor at the end of the agreed extension period.

If the trainee believes that the first appeal process was not conducted correctly, a second and final appeal can be made to the RCP, which must include reasoning as to why the trainee believes the original appeal process was not followed correctly. The decision of the RCP Head of Assessment Unit⁹ is final.

⁹ Or their nominated representative
The permitted grounds for appeal are:

- Assessment processes not followed correctly
- Mitigating circumstances warranting an extension which the participant was unable, through no fault of their own, to submit in time for the extension request to be reviewed and decided before the final portfolio submission date.
Appendix I: Obstetric Medicine Approved Training Centres

Guy’s & St Thomas’ NHS Foundation Trust (GSTT)

St Thomas's Hospital has a busy maternity unit delivering approximately 6500 babies per year. The Obstetric Medicine team sees approximately 12% of these women antenatally in outpatients, and a considerable number of patients are seen while admitted. The service here includes weekly joint Obstetric Medicine/cardiology clinics and monthly epilepsy/obstetric clinics and MDT. There is an Obstetric High Dependency Unit (HDU) with three beds in the Hospital Birth Centre (HBC) for particularly sick or complex high risk women.

University College London Hospitals NHS Foundation Trust (UCLH)

The Elizabeth Garrett Anderson (EGA) maternity unit at UCLH delivers around 6000 babies each year. The Obstetric Medicine team here run specialist clinics for pregnant women, and women planning pregnancy, with a wide range of acute and chronic medical disorders. The obstetric physician has a particular interest in the management of gestational syndromes, especially pre-eclampsia. Clinics are also held at other maternity units within the North Central London Maternity Network – The Whittington Hospital, The Royal Free Hospital, and a virtual clinic to support Barnet and North Middlesex hospitals.

Oxford University Hospitals NHS Foundation Trust (OUH)

More than 7000 babies are born in the John Radcliffe Hospital Women’s Centre every year. The Silver Star Service is a multidisciplinary team including obstetrician physicians, maternal fetal medicine subspecialty obstetricians, specialty physicians, psychological medicine, high risk midwifery and obstetric anaesthetics. We care for women in pregnancy with pre-existing medical conditions as well as conditions which arise during pregnancy. The service includes weekly joint obstetric medicine/cardiology MDT and clinic, weekly MDTs of all high risk patients, perinatal medical health clinic, general obstetric medicine clinics as well as a rapid access obstetric medicine clinic for urgent review of women with new or worsening medical symptoms and a preconception counselling service.

Queen Charlotte’s & Chelsea Hospital

As part of Imperial College Healthcare Trust, the maternity unit at Queen Charlotte’s & Chelsea Hospital delivers over 6000 babies per year. The de Swiet Obstetric Medicine Centre provides a multidisciplinary team approach for the management of pregnant women with any pre-existing medical disorder, in addition to pregnancy-specific medical disorders. This includes neurological, heart, endocrine/glandular, joint and connective tissue, bowel, kidney/renal, lung/respiratory, liver and metabolic disorders, haematological/blood disorders including sickle cell disease, thrombosis and coagulation problems, high blood pressure, diabetes and cancer.
Appendix II: Obstetric Medicine Credential- Educational Advisor

1. Appointment of an Educational Advisor

As a component of the Obstetric Medicine post-CCT (or equivalent) Credential, each clinical service provider offering the credential is required to allocate and confirm the role of a suitable consultant to act as a named Educational Advisor for participants undertaking the credential at that site. The Educational Advisor should have completed training in line with the General Medical Council’s Recognition and Approval of Trainers (http://www.gmc-uk.org/education/10264.asp), and must be on the GMC list of approved postgraduate trainers.

An Educational Advisor is a nominated consultant (or equivalent) who has accepted the role as the individual responsible for supporting, guiding and monitoring the progress of a named participant in the credential for a specified period of time. Every participant should have a named Educational Advisor and should be informed of the name of their Educational Advisor in writing.

In advance of the credential participant taking up their post, the Educational Advisor should ensure that they are adequately prepared for the role to:

- Ensure safe and effective patient care throughout the credential process
- Establish and maintain an environment for learning
- Teach and facilitate learning
- Enhance learning through assessment
- Support and monitor educational progress
- Guide personal and professional development
- Continue their own professional development as an educator.

In addition, the Educational Advisor should be familiar with the Obstetric Medicine Credential Competencies in Practice (CiPs- Table 1), areas of expertise (Table 2) and Outcome Decision Aid (Table 3). The Educational Advisor must ensure that they have sufficient identified time agreed within their job plan to carry out the role effectively.

In some cases, a credential post may cross more than one department. The clinical service provider should ensure that the Educational Advisor who is appointed has responsibility for liaising with the participant’s key clinical supervisors in these departments and for coordinating the feedback, support and guidance.
2. Role and responsibilities of the Educational Advisor for Obstetric Medicine

The Educational Advisor is required to oversee the learning experience, performance and progress of the participant and provide guidance to enable them to gain and/or enhance their skills, knowledge and attitudes to fulfil the objectives of the credential and meet the clinical service need.

Main duties and responsibilities

The Educational Advisor should:

- ensure that the participant gains appropriate clinical experience commensurate with the objectives of the credential;
- provide clinical guidance (supervision) as appropriate to the level and experience of the credential participant;
- set aside protected time (normally 1 hour per week) to enable the participant and the named Educational Advisor to review cases, discuss progress and issues;
- provide assessment of the participant and their progress on the credential and hold review meetings at least monthly in line with the Table 4;
- ensure that they maintain an appropriate written record to enable continuity of guidance and feedback to the participant as appropriate;
- ensure that the credential participant provides them with a copy of all assessments they have undertaken during the programme.

3. Supporting and guiding the Obstetric Medicine Credential Participant

The responsibility of the credential participant is:

- To work with the Educational Advisor to develop and demonstrate attainment of the appropriate skills/knowledge/attitudes sought from the credential and in line with the GMC’s Good Medical Practice within the agreed timeframe

- To provide satisfactory evidence of their progress for review by the Educational Advisor and External Reviewer

It is suggested that the Educational Advisor adopts the following practices to facilitate achievement of the objectives for the credential in Obstetric Medicine:

---

10 Based on the original documentation ‘Post-CCT Fellowships Guidelines- Educational Guide’ created by the JRCPTB
Ensuring safe and effective patient care throughout the credential

The Educational Advisor should ensure that:

- the credential participant has appropriate departmental/team(s) induction;
- the health, wellbeing and safety of patients is maintained at all times;
- credential participants are involved in service improvement;
- educational interventions are used to improve patient care

Establishing and maintaining an environment for learning

The Educational Advisor should:

- be proactive in encouraging the credential participant to share their views on their experience;
- establish a learning community within their department and/or in relevant areas of the organisation;
- monitor, evaluate and take steps to address areas for improvement in the participant’s education and learning;
- ensure that the participant is exposed to appropriately skilled teachers and supervisors;

Teaching and facilitating learning

The Educational Advisor is expected to:

- demonstrate exemplary subject knowledge and skills;
- help the credential participant to further develop their self-directed learning;
- encourage and facilitate reflective learning;
- understand and be able to apply educational frameworks to the credential participant’s individual needs;
- ensure that the participant is able to make contributions to clinical practice as appropriate, and in line with the level of their performance and competence
Enhancing learning through assessment

The Educational Advisor should:

- plan and/or monitor assessment opportunities to support the development of the participant and to meet the level and standard expected from attainment of the Obstetric Medicine credential;

- understand and apply assessment frameworks which are relevant to assessment of the participant’s skills, knowledge and attitude and complement the normal revalidation process as outlined in the GMC’s The Good Medical Practice Framework for Appraisal and Revalidation (http://www.gmc-uk.org/static/documents/content/GMC_Revalidation_A4_Guidance_GMP_Framework_04.pdf)

- provide regular feedback to the participant that is clear, focussed and aimed at enabling them to improve specific aspects of their performance

Supporting and monitoring educational progress

The Educational Advisor is expected to:

- Explore and agree a learning contract and professional development plan with the participant at the beginning of the credential;

- understand the clinical and core component aspects of the credential and how these might be achieved;

- identify learning and clinical service needs and discuss and gain agreement from the participant on the objectives to be met;

- facilitate opportunities for a wide-range of relevant learning opportunities and to support the participant in accessing these, where appropriate;

- review and monitor the credential participant’s progress through regular, timetabled meetings;

- ensure that appropriate written records are maintained and shared with the participant to enable appropriate feedback and guidance and to provide a record of progress throughout the credential which enables the participant to recognise strengths and to address areas of concern;

- provide guidance, and monitor the development of the participant’s portfolio (it is the participant’s overall responsibility to ensure that their portfolio is maintained and developed and that all supporting documentation is included);

- respond effectively and efficiently to emerging problems with a participant’s progress, liaising with their clinical supervisors for constructive feedback, as appropriate;
be proactive in seeking opportunities for support and guidance for participants whose learning needs are outside the scope and responsibility of the educational guide.

Guiding personal and professional development

The Educational Advisor should:

- ensure that the credential participant takes part in multi-source feedback;
- provide guidance on the development of a portfolio and the overlap with the appraisal and revalidation process;
- provide guidance on the wider national context of professional development for doctors;
- act as a positive role model and to continue to develop own skills and techniques relevant to clinical service and personal and professional development.

Continuing own professional development as an educator

The Educational Advisor is expected to:

- participate fully in local appraisal, validation and educational development activities;
- actively evaluate own practice and act on formal (e.g. appraisal) and other (e.g. views of colleagues, patients, trainees, fellows) feedback received;
- develop and act on a personal development plan.
Appendix III: Obstetric Medicine Credential - External Reviewers

1. External reviewing and quality assurance

External reviewing provides a means of ensuring the highest academic standards are maintained on the RCP Obstetric Medicine Post-CCT Credential and is an important part of the process of ensuring objectivity and fairness for the doctors undertaking the credential.

2. Appointment of External Reviewers

As a component of the Obstetric Medicine RCP post-CCT Credential, suitable persons should be appointed to the role of External Reviewer. The following are criteria for appointment:

- External Reviewers must be from outside the Obstetric Medicine training centre(s) where the participant has undertaken obstetric medicine credential training
- External Reviewers must not provide direct supervision on the post-CCT obstetric medicine credential during the period of the participant’s credential training\(^{11}\)
- External Reviewers must be experts in the area of Obstetric Medicine
- External Reviewers must meet any specified qualification requirements of the professional, statutory and regulatory bodies
- External Reviewers will be asked at the time of appointment, or continuation in appointment, to declare any interest in or connection with any doctor or staff on the credential for which they are acting as External Reviewer whether that interest or connection is personal or professional. If such an interest or connection exists, the External Reviewer in question should not be appointed.
- After serving a period of four consecutive years, an External Reviewer is not eligible for reappointment at the same approved training centre for a period of five years
- Continue own professional development as an External Reviewer

3. Role and responsibilities of the External Reviewers for the RCP Obstetric Medicine Credential

Role purpose – First External Reviewer

The first External Reviewer is required to examine the portfolio of work of each physician undertaking the credential and make a judgment as to whether they pass or fail, or require an extension.

The External Reviewer is allocated by the approved training centre at the start of the Obstetric Medicine credential.

\(^{11}\) Normally six months prior to assessment submission but this period may have been extended in line with credential regulations, see page 21
Main duties and responsibilities

Review the quality of the doctor’s portfolio and logbook to judge whether they have met all relevant criteria

- Provide a mark of **pass** or **fail** or **recommend extension**
- Follow and apply all relevant criteria when assessing a doctor’s portfolio of evidence and logbook
- Liaise with the Educational Advisor as appropriate
- Provide feedback on assessment decisions to the Educational Advisor and External Reviewers as appropriate
- To ensure that an appropriate written record is maintained to enable continuity of process

Role purpose – Second External Reviewer

The second External Reviewer is required to make a judgement in cases where there is disagreement between the Educational Advisor and the first External Reviewer as to the mark awarded, or the granting of an extension.

Main duties and responsibilities

- Review the quality of the doctor’s portfolio and logbook to judge whether they have met all relevant criteria
- Provide a mark of **pass** or **fail** or **recommend extension**
- Follow and apply all relevant criteria when assessing a doctor’s portfolio of evidence and logbook
- Liaise with the Educational Advisor and first External Reviewer as appropriate
- Provide feedback on assessment decisions to the Educational Advisor and External Reviewer, and, if appropriate, to the RCP.
- To ensure that an appropriate written record is maintained to enable continuity of process
Appendix IV: Form A - Confirmation of Participant Details

Confirmation of Participant Details for post-CCT (or equivalent) Obstetric Medicine Credential

Please complete in BLOCK CAPITALS

Part 1 - to be completed by participant

Full Name

GMC Number

Email (NHS email preferred)

Job title +/- CCT date if relevant

Usual place of work

Approved Training Centre for Credential

Start date of credential

Full time / Less than full time (circle as appropriate)

Signed

Part 2 - to be completed by Educational Advisor

I can confirm that:

☐ The participant named above meets eligibility criteria to undertake the post-CCT (or equivalent) Credential in Obstetric Medicine

☐ An External Reviewer (ER) has been appointed by the Training Centre

Name of ER: ___________________________________________________

☐ I am the Educational Advisor for the above-named participant

Proposed completion date for credential (pro rata for LTFT participants):________________________

Signed (Educational Advisor)____________________________________________________________

Print name __________________________________________________________________________

Job title __________________________________________________________________________

Date ______________________________________________________________________________

Once completed, please return to the Assessment Unit at RCP London (obstetricmedicine@rcplondon.ac.uk)
