Which is the most likely diagnosis

- Cardiac amyloid
- HOCM
- Myocarditis
- Myocardial ischaemia
Please vote now
30 yr old presenting with dyspnoea and palpitations.

- Hypertrophic basal septum
- LVOT narrowing and flow acceleration (Dark line)
- Systolic anterior motion of anterior Mitral valve leaflet (SAM)
Mid myocardial late gadolinium enhancement in hypertrophic septum
65 YEAR OLD MAN

- Tiredness
- Anaemic
- Night sweats
- Intermittent pyrexia
- Raised inflammatory markers
- Past history of alcohol excess
Diagnosis?

- Kawasaki disease
- IgG4 X
- Lymphoma
- Syphilis
Please vote now
Diagnosis?

- IgG4-related disease
- Both allergic and autoimmune disease
- Biopsy?
- Clinical features?
- Elevated IgG4 levels?
- He has responded to steroids
- Hypertrophic pachymeningitis
- Autoimmune hypophysitis
- Orbital pseudotumor
- Mikulicz’s disease
- Kuttner’s tumor
- Riedel’s thyroiditis
- Hashimoto’s thyroiditis
- Pulmonary pseudotumor
- Interstitial pneumonia
- Lymphadenopathy
- Autoimmune pancreatitis
- Sclerosing cholangitis
- Liver pseudotumor
- Retroperitoneal fibrosis
- Tubulointerstitial nephritis
- Inflammatory aortic aneurysm
- Prostatitis, testicular involvement
- Cutaneous pseudolymphoma
